

PC-5

Portable Patient Conveyor

PC-5 is ACSI's newest portable quick deployment non-ambulatory modular conveyor system. PC-5 can be assembled in under a minute by simply spreading its two heavy-duty "H" frame legs and locking the angle struts. PC-5 units are easily interlinked to form continuous conveyor lines. PC-5's ball bearing roller assembly can carry over 400 lbs of weight per section.

A convenient integral spring loaded carrying handle makes the unit easy to transport by a single operator.

SPECIFICATIONS
